

MESSAGES FROM THE EDITORIAL BOARD

There has been a wide gap between science and society in Latin America. Due to the difficulties of bridging the gap, this stage recently was the nightmare stage. Instead of passively waiting, Latinamerican researchers and engineers who understand the potential of the research have decided to actively bridge the gap.

Technology integration in research, on the other hand, in some cases is kept as a personal know-how. This is the reason why we have decided to publish the "*Journal of Latinamerican Sciences and Culture*" (JLASC), a new Journal. Each article in it will present scenarios of societal, technological, educational, or scientific value.

Through the publishing of papers in this journal, Latinamerican researchers, engineers, teachers, and professors and can enhance the transformation of scientific outputs into the societal prosperity and contribute to the sustainable development of the region. These efforts serve to increase the significance of research activities to Society.

The Editorial Board JLASC

I am pleased that the Andean Road Countries for Science and Technology and Universidad Privada del Valle (UNIVALLE) have created a technological and scientific bridge between China and Latin America. So many young students from Latinamerican countries can improve their knowledge, scientific and technical skills through the *JLASC*.

To promote the China-Latinamerican cooperation and development in space technology, crossing the bridge, we would like to push forward more education, academic exchange, space engineering experience sharing and jointly multilateral cooperation with Latinamerican countries. God rewards the diligent. I wish each of you a fruitful and rewarding study in 2019.

Prof. Dr. Wang Xinsheng

Associate Editor

JLASC

JLASC recovers the essence of the ancient *Andean Road* that connected Latin America from south to north across the Andean mountains. The Andean Road was especial because it connected Intellectually several cultures in the region. Through this road, ancient empires, kingdoms, and civilizations exchanged communication, collaboration, and knowledge.

JLASC aims to connect through knowledge, science, technology, innovation, education, and culture the Latinamerican community of scientists, researchers, and the society through the multidisciplinary focus of the Journal. We are glad to have your contribution.

Prof. Dr. Marco A. Cabero Z.

Editor-in-Chief

JLASC
